

ID	1
Name	Put item to the cart using the Selenium IDE automation test.
Short Description	User chooses a product item and puts it to the cart to order.
Goal	Check how the system works with the operation of choosing product and putting it to the cart
Precondition	The user is opening the main page, goes to “Товари” page and opens “Військова форма (піксель)” product item. Choose the size 44 and increase its quantity to 3 and click the “Купити” button.
Success Conditions	All operations are working. Choosing a product item works by opening a detailed product page. Increasing the product quantity button works correctly and changes the quantity of product. By clicking the “Купити” button the product appears in the cart. The total order price is shown according to the chosen quantity.
Fault Condition	Selenium IDE can't find checkpoints.
Participants	Guest website User.
Dependencies	More than 30 Users making the order at one time. No stable internet connection.
Normal Flow	<ol style="list-style-type: none"> 1. Guest User opens the main website page Oliva.in.ua. 2. User opens “Товари” page 3. User chooses “Військова форма (піксель)” product detail page 4. User chooses product size “44” 5. User Increases product quantity from “1” to “3” 6. Clicks on “Купити” button 7. Cart checkout. Check the total price which is shown in the cart.
Includes	Previous Log Out and deleting items from the cart if they were added to the cart before this session
Frequency of Use	About 1-2 times per day.
Notes and Issues	This flow should test on Chrome
